

Insulation & Building Treatments

Accredited through City & Guilds

National Energy Action (NEA) and City and Guilds (C&G) have been instrumental in maintaining NVQs for the energy efficiency industry since 1991. In collaboration with the industry via the Construction Sector Skills Council, the National Occupational Standards have been revised regularly and the NVQs have been revised on four occasions to ensure they meet the requirements of the standards.

There are currently a number of initiatives, which are positively influencing the uptake of NVQs in the energy efficiency field. These are:

1. Major contractors are requiring that companies tendering for work should have workers who are in possession of their skills card (CSCS card Construction Skills Certification Scheme).
2. Organisations such as Eaga Partnership are likely to use NVQ qualifications of workers as a measure of competence, when receiving tenders for work from companies. Similarly local authorities are more likely to favour organisations with workers qualified to NVQ Level 2 in their tenders.

The table below outlines the pathways within the NVQ that are available.

C&G Pathway	NVQ Title
5987-07	Wood Preserving and Damp Proofing
5987-08	Wall Tie Replacement
5987-09	External Wall Insulation
5987-10	Cavity Wall Insulation
5987-11	Loft Insulation
5987-12	Draught Proofing
